

Measuring Feet

Measuring Feet introduce children to measurement concepts in a great and fun way. The inflatable feet can be used to teach estimation and simple measuring skills. Each foot measures 12 inches (1ft.) in length and 20 cm in width. There are no markings on the feet, so children can use them as non-standard units of measurement. The inflatable feet are durable and easy to clean.

How to Use:

Simply blow up the inflatable feet and have children wear them instead of shoes. Two pairs are included so that two children can compare measurements.

Call out an item in the room and have the children estimate how many steps (feet) it is from them. Then, have them measure the distance by putting one foot in front of the other (heel to toe) until they have reached the destination. After they walk, have them compare the answer to the estimate, or instruct them to compare their measurements.

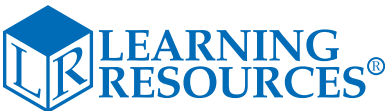

To measure in centimeters, have the children walk sideways.

Children will love walking around in these feet and they will always know how far they have traveled!

Special Note:

To avoid slipping, do not run or jump with the Measuring Feet on.

- The feet can fit up to a 6.5 (US) shoe size. Do not put on over shoes.
- Please have socks on when using the Measuring Feet.
- The feet can be cleaned with a disinfecting cloth.
