1. For a more challenging game, when players land on a space on the board, subtract that amount from $1.00. The difference is the amount you earned for that turn. This is a great way to practice making change from a dollar!

2. Practice money skills without the board. Roll two dice and arrange them up with the largest number first (example 6, 4). This represents $0.64. Using the play money included with Money Bags, have children count out the change they would receive from a dollar if they purchased something for $0.64.

Tips for counting out change:

Use pennies to reach the next multiple of 5. (Add one penny—now you’re at .65.)

Next, use nickels and/or dimes, whichever is fewer, to reach the next multiple of 25. (Add one dime—now you’re at .75.)

Finally, use quarters to reach $1.00. (Add one quarter to reach $1.00.)
