Build motor & matching skills!

- **MATCH THEM:** This game does not require the camera. Scatter all the large and small picture cards around the playing area with the images facing down. Let your child turn over one large and one small card and see if there is a match. If a match is made, put the two cards together and put them to the side. If a match isn’t made, flip both cards back over and continue. Keep playing until all pairs are matched. You may want to start the game with fewer cards and build up to the complete set as your child masters the concept.

- **ALL AROUND THE HOUSE:** Choose 3 small picture cards that represent different attributes, such as one animal, one food, and one color. Insert the first picture card and ask your child to go on a photo hunt, looking around the house for objects that have the same attribute. Ask: “Can you find other animals?” or “Can you find other red things?” or “Can you find other things you eat?” Switch out the cards until you have completed all 3.

- **FIRST LETTERS:** As your child begins to learn their letters, go on a letter finding journey. Insert a small card into the camera and help your child identify the first letter, e.g., “Apple starts with A.” Have your child look for other objects that start with the “A” sound. Another idea is to look for the letter “A” on objects around the house, such as on book covers and food labels.
